

Smart TOOL FLEX

Flexible Denesting

The Smart Tool Flex is designed for trays that do not have a consistent edge that a screw denester can screw in between. Instead it works by clamping the stack, and then clamping the bottom of the lowest tray in the stack and pulling down. It delivers a reliable capacity of up to 60 trays per minute - even when handling trays made of cardboard, pulp, or other non-standard material.

Easy Tray Change

The Smart Tool Flex is compatible with any Smart denester, regardless of production year. This ensures full flexibility on tray selection. Moreover, it enables continued use of existing production lines and equipment, simply by switching the tool in the Smart tray denester.

Hygienic Design

The patented open construction of the Smart Tool Flex allows for thorough cleaning of all parts.

Built for real production conditions, the tool combines hygiene, speed, and ergonomic handling, which makes it the core of any efficient denesting setup.
